Disclaimer:

This script is provided for free with no cost and no strings attached, however if you find it worthy you may donate to the author. It is free to use but not to redistribute by other parties than the creator.

Files:

guestbook.php - Main guestbook page.

guestbook.jpg - "Guestbook" image of the main guestbook page.

act.php - Action file.

style.css - Stylesheet file to improve the look and feel of the script.

messages.txt - The file where the data are written.

img_ver.php - The file that displays the "captcha".

img_ver.png - The background of the "captcha" numbers (can be changed to any other picture you like as soon as the name of file stays "img_ver.png").

ok.jpg - Message sent image.

error.jpg - Message error image.

lang/en.php (and other lang files) - language file in 'lang' directory for ease of translation to your language.

Instructions:

IMPORTANT - PHP 4.x or higher must be installed on the server to run this script.

ONLY IF you have PHP5 installed - you can Uncomment lines 8 and 9 in the "img_ver.php" file for "Gaussian blur" effect of the "captcha".

1. Upload all the files to your server.

2. CHMOD the 'messages.txt' file.

3. Access the page by navigating to it with your browser

(<http://www.yourdomain.com/guestbook.php>). or use `<?php include('guestbook.php'); ?>` to display it on desired area of the page.

Done!
