

# How to upgrade TP-LINK Wireless N Router

## Notice:

- **Please verify the hardware version of your device for the firmware version. Wrong firmware upgrading may damage your device and void the warranty.**

	Published Date	8/25/2010
	File Size	3.614 MB
	Operating System	Win98SE/Me/NT/2000/XP/2003/Vista/Windows 7/Linux
	Modifications and Bug Fixes	<ul style="list-style-type: none"><li>• Fix some problems about IPSec.</li><li>• Fix some bugs about IPoE.</li><li>• Fix display problem on wireless page.</li><li>• Add support to No-IP DDNS.</li><li>• Time can be set manually or sync with PC.</li></ul>
	Notes	

- After you downloaded the firmware from TP-LINK website, **please use decompression software such as WinZIP or WinRAR to extract the firmware file to a folder, the firmware is usually named as XXXX.bin;**
- Do NOT upgrade the firmware through **wireless** connection unless the device only has wireless connection;
- Do NOT turn off the power or cut down the Ethernet cable during upgrade process;
- It's recommended that users stop all Internet Applications on the computer, or simply disconnect Internet line from the device before upgrading.
- **Write down all the settings which you changed from the default values, since you may need to reenter them manually.**
- Internet Explorer(IE) is the recommended web browser for upgrading firmware.

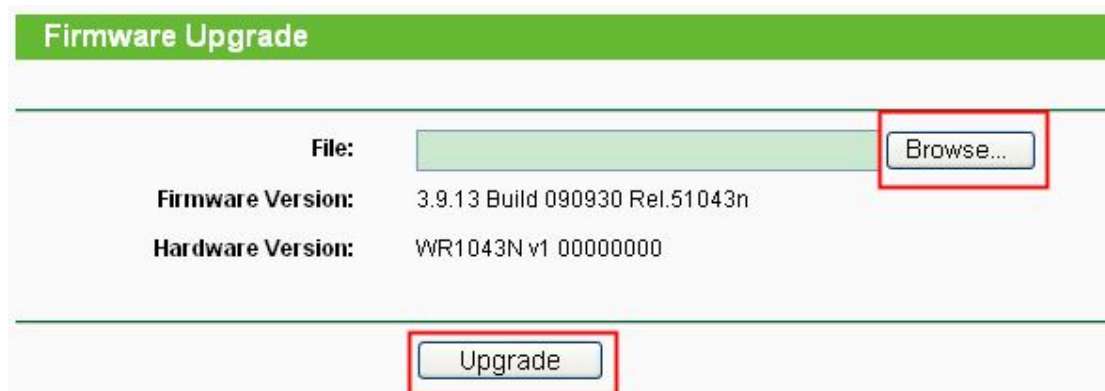

**Step 1** Log into the TP-LINK device by typing <http://192.168.1.1> (See the Note below for more information) in the address bar of the web browser (such as Internet Explorer, Firefox). The default user name and password are both **admin**.

**Note:** Some of our new routers are using <http://192.168.0.1> or <http://tplinklogin.net> as the Management Address. Please check it on the bottom label.

**Step 2** Click **System Tools** -> **Firmware Upgrade**, click the **Browse** button to choose the firmware you already extracted in the folder.

**Step 3** Click the **Upgrade** button. The device will reboot automatically after the upgrading has been finished. Please wait about 3 minutes.

**Step 4** Click **Status**, verify that the router's firmware has been upgraded.

**Step 5** It is recommended that restoring the device to factory default to make the new functions take effect; Click **System Tools**->**Factory Defaults**, Click **Restore** Button.

## Factory Defaults

Click the following button to reset all configuration settings to their default values.

Restore

**Step 6** After restoring factory default, please login <http://192.168.1.1> or <http://tplinklogin.net> and re-enter the settings you have written down before upgrading.
